

What this course is. A full-year, college-preparatory study of the human body — how it is built (anatomy) and how it works (physiology). Across the year your student travels the body system by system, building each one in immersive VR as they learn it. **The arc:** Semester 1 covers the body in **support, movement, regulation, and transport** (organization & tissues, skeletal, muscular, nervous, endocrine, cardiovascular); Semester 2 covers the body in **defense, exchange, regulation, and continuity** (immune, respiratory, digestive, urinary, reproductive), closing with the idea that the body is one integrated, life-ordered whole. **34 weeks** (32 instructional + 2 finals) · **11 modules** · **128 lessons**.

THE YEAR AT A GLANCE

SEMESTER 1 — Support, Movement, Regulation & Transport

1 • Introduction	Body organization, the chemistry of life, the four tissues, and the skin	8 lessons
2 • Skeletal	Bones, the skull, spine, limbs, and joints	12 lessons
3 • Muscular	Muscle types, how muscles contract, and the major muscles	12 lessons
4 • Nervous	Neurons, the brain, spinal cord, reflexes, and the senses	12 lessons
5 • Endocrine	Hormones, glands, and the body's chemical control	8 lessons
6 • Cardiovascular	Blood, the heart, vessels, and circulation	12 lessons

SEMESTER 2 — Defense, Exchange, Regulation & Continuity

7 • Lymphatic & Immune	Lymph, immunity, vaccines, and antibiotics	12 lessons
8 • Respiratory	Lungs, breathing, and gas exchange	12 lessons
9 • Digestive	Digestion, absorption, and nutrition (longest unit)	16 lessons
10 • Urinary	Kidneys, filtration, and fluid balance	12 lessons
11 • Reproductive	Reproductive systems & development (capstone)	12 lessons

Each semester ends with a **Finals Week**: a review lesson, a synthesis activity, and a 90-minute comprehensive final exam.

MODULE PROJECTS & THE CAPSTONE

- ▶ **Every module** ends with two projects: a **written piece** (a 400–700-word evidence-based argument in the student's own words) and a **VR snapshot** — the body system the student has sculpted across the unit, captured and graded on completeness, accuracy, week-by-week building, and a short written reflection.
- ▶ **Module 11 capstone:** a complete reproductive-system VR snapshot (student chooses male or female) closes the year.

A TYPICAL WEEK

- ▶ **Four lessons a week.** Each lesson has three Canvas pages, done in order: a **Reading** (the content), a **Lesson** (activities + a VR session), and an **Assignment** (the graded work).
- ▶ **VR / ENGAGE:** most lessons include a hands-on session in which students sculpt and label that week's anatomy, building the system piece by piece. A few lessons swap in an interactive simulation instead.
- ▶ **One reading quiz** each week (multiple choice, matching, true/false).
- ▶ **Ongoing:** students add to the module's VR snapshot and draft the module essay, both due at the module's end.

TIME COMMITMENT (estimate)

Readings (4)	~1.5 hr
Lessons + VR sessions (4)	~2 hr
Assignments (4)	~1.5 hr
Reading quiz	~0.5 hr
Project work (essay + snapshot)	~0.5–1 hr
Typical week	~5–7 hr

Note: these are estimates inferred from the course design, not fixed figures. Module-end & finals weeks (essay + VR snapshot due) usually run longer.

WHAT STUDENTS NEED

- ▶ **VR headset + ENGAGE** — the core hands-on tool, used most weeks.
- ▶ **Canvas** — the course home; readings, lessons, and assignments all live here.
- ▶ **Microsoft 365 / OneDrive** — for typing and submitting written assignments.
- ▶ **No textbook, links, or PDFs needed** — the course is fully self-contained (just Canvas + ENGAGE).
- ▶ **AI:** no AI tool is required, and written work is expected to be the student's own.

WORKING STYLE & CHOICES

- ▶ The course is designed to be completed **individually and self-paced**.
- ▶ **Student choice** appears throughout: where to work in VR, and which system to build for some snapshots (e.g., the Module 11 capstone).

ON-DEMAND (SELF-PACED)

This course is built for the asynchronous, on-demand experience: students move at their own pace, with a teacher available throughout for support, feedback, and grading.

LIVE SCHOOL

Live-school students complete the same course in VR every day, together with a teacher and classmates.

PLEASE NOTE

This describes the course as designed. The week-to-week experience may vary from teacher to teacher, as each leans into their own strengths and passions.
